Broader coverage changes the findings

Four image models; provisional unattended labels; weak anomaly diagnostics; retained smoking/VadCLIP

55,156

New GPU predictions

40 completed model/split runs

1,770

Unattended endpoints

36 previously; 49.2× increase

962

Held-out inputs / protocol

242 positive + 720 normal

MiniCPM: strongest raw frame F1

F1 0.479 • recall 34.7% • FPR 3.47%
Many positive endpoints are still missed.

Three anomalies now attempted

6,667 littering; 1,675 loitering; 111 pose scenes.
Weak labels limit accuracy claims.
